

Greenwich Hospital

Ambulatory Surgical Center

Location	Greenwich, Connecticut	Size	16,000 square feet
Architect	The S/L/A/M Collaborative	Cost	\$7 million
Services	MEP/FP, Technology Design	Completed	2008

In addition to the many projects completed at Greenwich Hospital's main location, Kohler Ronan provided comprehensive engineering consulting services for the hospital's Holly Hill Campus ambulatory facility. The project consisted of the conversion of existing office space into a state-of-the-art surgical suite spread across the building's 2nd and 3rd floors.

Kohler Ronan's mechanical designs called for the removal and replacement of existing 3rd floor HVAC services and new HVAC on the 2nd floor. Plumbing, electrical, and fire protection systems were modified to support the new program and architecture. Energy-efficient lighting, emergency lighting, and a new emergency generator were incorporated.

The Leona M. and Harry B. Helmsley Ambulatory Surgical Center consists of three operating rooms equipped with the most advanced technology, including high-definition video cameras for arthroscopic procedures, state-of-the-art surgical equipment, and a full-service sterile processing facility. A nursing station and 10 beds make up the post-operative area. Kohler Ronan was pleased to have contributed its services to such a facility.
